KNIFE BLOCK MADE OF SAWN TIMBER

nobilia[®]

WHAT YOU NEED

- » Sawn wood plank, oak, 80 x 30 cm
- » Square wooden slats, various widths, 3 to 6 mm thick
- » Wood glue
- » Hand saw or jigsaw
- » 2 screw clamps

KNIFE BLOCK MADE OF SAWN TIMBER

Sawn timber is available in the timber and wood departments of many DIY stores. Its most special features are the rustic structure and the natural shape of the wood, which make the knife block unique.

HOW TO DO IT

- 01.** The plank can be sawn into 4 pieces of 20 cm each at the time of purchase. If you have a hand saw or jigsaw, you can do it yourself at home. Smooth the edges with sandpaper.
- 02.** For the walls within the knife block, saw the wooden strips of different widths but the same thickness into sections slightly less than 20 cm long.
- 03.** Glue four strips vertically to the first plank at the same distance from it, then glue the second plank to it. Work two more layers in the same way. You can vary the distances between the strips if you like. This will create slots of different sizes for knives of different sizes.
- 04.** We suggest placing the whole package on a flat surface to dry to ensure that it is steady and stable when finished. Then apply the screw clamps and tighten firmly. You can remove the clamps once the glue has set and put your knives in the block.

TIP

Allow the glue to harden well before using the knife block.
